

GROWING GREEN TOGETHER

GROWING GREEN TOGETHER

AN IDEAL WHOSE TIME HAS COME

We are Evergreen and saving the planet is what we do. We believe oceans are for turtles, not trash. We know multi-use plastic resins like rPET are the way to go. That recycling reduces our dependence on landfills. We make sustainability easier and real for companies and communities like yours.

CHECK OUT THESE NUMBERS. AND YES. IT'S JUST A START.

2 Billion Plus PET Bottles Recycled Each Year

**80 Million Pounds of Food Grade rPET Pellet
Produced Each Year**

87,100 Tons of Recyclable Material Collected Each Year

ABOUT EVERGREEN

A division of Greenbridge, Evergreen was founded in 1998 to provide a sustainable, reliable supply of PET for the company's portfolio of PET strapping. In 2021, Evergreen acquired a second recycling and rPET manufacturing operation in Riverside, California, doubling capacity. Evergreen is today among the nation's largest plastic recyclers and a preferred supplier of food and non-food grade rPET to top converters and global brands, enabling them to increase recycled content in their plastic packaging, achieve sustainability goals and support reportable Environmental, Social and Governance actions. And that's not all.

WITH OUR SUSTAINABILITY SOLUTIONS, THE CIRCULAR ECONOMY IS WITHIN REACH.

We all have a vested interest in adopting new practices that reduce one's environmental impact. But how do we turn complex issues into simple, easy to implement solutions? Evergreen and our parent company Greenbridge Packaging have the answer: partnering with customers on sustainability solutions that leverage our core strengths and vertical integration in recycling, manufacturing, rPET production, tools and equipment, technology, training and services.

Each solution begins with an audit that identifies opportunities to reduce waste through recycling, re-use, or changes in processes or products. Results are translated into an action-driven sustainability solution unique to the customer that propels circular economy ideals into measurable results. And we do so in a way that advances sustainability without sacrificing business objectives. Today, Evergreen is helping major customers across industry sectors reach new heights of environmental sustainability.

UP YOUR RECYCLED CONTENT WITH EVERGREEN rPET, THE INFINITELY RECYCLABLE PLASTIC

Increasingly, consumers base buying decisions on a brand's environmental and social impact. Want to make an impression? Add Evergreen rPET to your bottles, containers and other plastic packaging. Evergreen rPET—short for recycled polyethylene terephthalate—is offered in clear pellet and flake formats with or without an FDA Non-Objection Letter (NOL) depending on the application. All Evergreen rPET is produced to the customer's specifications. Quality controls are built into every step of our production and shipping processes. All testing is done in our state-of-the-art onsite testing center.

Our annual capacity is over 80 million pounds. However, we're adding a third pelletizing line dedicated solely to food-grade rPET. When completed in early 2022, our capacity will increase to over 120 million pounds of this infinitely recyclable, brand-enhancing plastic.

OUR RECYCLING SERVICES HELP MAKE LANDFILLS A THING OF THE PAST

According to the EPA, 146.1 million tons of municipal solid waste were sent to landfills in 2018. The top three culprits? Plastics at 18.5 %, paper and paperboard at 12%, and metals at 9.5%. Evergreen is committed to bringing these numbers down with recycling services. We partner with municipal recovery facilities, bottle makers and other manufacturers, brokers, and small reclaimers, enabling them to divert as much waste as possible from landfills while turning waste streams into income streams. We purchase and recycle:

**PET Bottles,
Preforms,
Flake + Purge**

**PET Strapping,
Baled + Chopped**

**Mixed Paper +
Corrugated**

**Aluminum +
Metal**

Film

BYPRODUCTS THAT ADVANCE THE CIRCULAR ECONOMY, SORTED AND READY FOR YOUR APPLICATION

There are a million uses for recycled content. Think playground equipment, plush jackets, baseball bats, and even kitty litter. Evergreen offers post-consumer recyclable materials that are sorted and ready for these and other applications. Byproducts available for purchase are PET flake, fines and purge; film; PP/PE caps and rings; aluminum cans, and more. Byproducts are sold in full or mixed truckloads.

This can-do company wants to know what we can do for you.

The Evergreen team is passionate about growing green together one customer at a time. Are you next? The best collaborations start with a conversation.

When you're surrounded by people who share a common commitment around a common purpose, anything is possible.
